

Installation

Model specific instructions

For:

- Triumph Trophy
- Triumph Trophy SE

These instructions are a model specific add-on to the general BoosterPlug installation instructions.

Installation Tips

- Install the BoosterPlug module as per the general installation papers.
- The pictures below should help you locate the AIT sensor where the BoosterPlug is installed.
- Remove the gas tank.
 - **WARNING:** Removing the gas tank on a Trophy is not easy. If you're experienced with tools and know about bikes, just go ahead, but this is not a good first DIY project. If you're in doubt, ask your mechanic to install the BoosterPlug for you !
- The red circle will show you the location of the AIT sensor.
- Install the BoosterPlug as shown in the next picture and route the BoosterPlug module to the location shown with a yellow circle.
- You have several choices for the BoosterPlug sensor location, but our favorite places are near the steering head, under the head light, or next to the airbox snorkel air intake hole.
 - Just stick to the simple rules in the general installation instructions for placing the external sensor, and you'll be fine.
