

Installation

Model specific instructions

For:

- **Yamaha TDM900**

These instructions are a model specific add-on to the general BoosterPlug installation instructions.

Installation Tips

- Install the BoosterPlug module as per the general installation papers.
- The picture below should help you locate the AIT sensor where the BoosterPlug is installed.
- Remove fuel tank to access the AIT sensor in the air box..
- The AIT sensor is located in the bottom of the air filter box right in front of the throttle valve bodies. (See pictures below).
 - This means that you will have to lift the air filter box to access the AIT sensor. It's not rocket science, but it takes a little longer than the usual 10 minutes to install the BoosterPlug on the TDM 900.
- You have several choices for the BoosterPlug sensor location, but our favorite place is near the steering head or under the head light. Next to the airbox snorkel air intake hole is another very good spot.
 - Just stick to the simple rules in the general installation instructions for placing the external sensor, and you'll be fine.
