

# Mounting Instruction

Modell: **BMW R 1200 R/RS**

Description: **Rear fender  
KHO.002.R12RL.K  
(Edition II)**

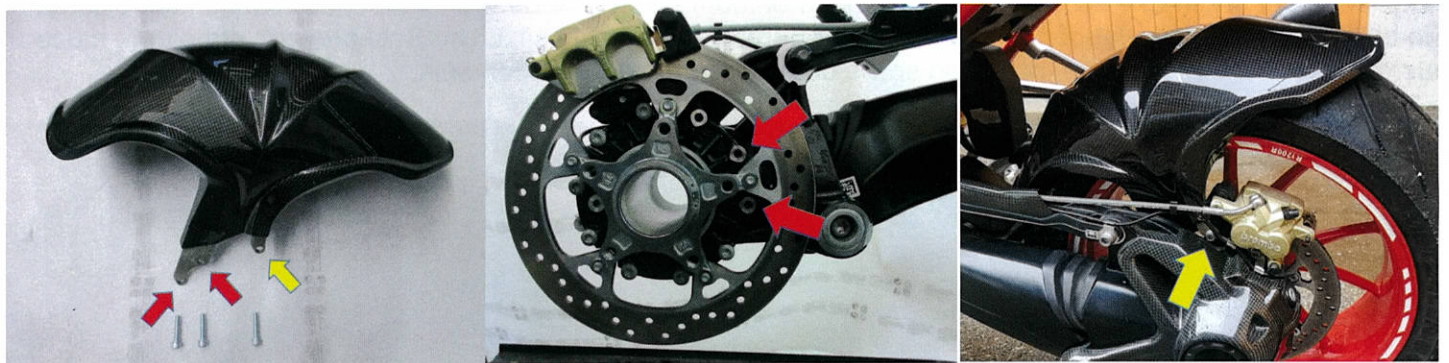

Thank you very much for your confidence in our products.

Prior to mounting, please check the compatibility of this component based on the documents supplied with your vehicle type. The required number is visibly embedded on the inside of the carbon component.

Mounting: Please ensure, you are on safe ground with the help of a mounting stand, or the main stand for the stability of your motorcycle.

## Description :

Please remove the wheel screws of the rear wheel and remove the rear wheel. As next step, please unscrew the two red marked screws ( Pic 1 & 2 ). To reach these, it may be necessary you have to turn the brake disc a little bit. Now you can remove the yellow marked screw, which is attached to the brake caliper ( Pic 1 & 3 ). Now you can put the carbon part at the fixing points and mount it with the three original screws and the torque recommended by BMW. After this, you can re-install the rear wheel! in reverse order. Please do not forget to remount all screws. Please also note the tightening torques when fitting the original screws. After successful installation, check if the rear hugger is parallel to the tyre and swingarm. Sufficient space is needed between the tire and the carbon part to prevent any damages.

**Please look for enough free clearance to all surrounding, and moveable components. Please mount all screws, and watch for the correct fitment of the parts, before tightening the screws. Please pay attention to the original torques (tightness's).**

Enjoy your Ilmberger Carbon Component after successful installation.

General Note: Our instructions have been checked to the best of our knowledge, but are without guarantee. If you have any problems with mounting, or have any questions, please contact us, or your trusted dealer or workshop..
